Red Hat

Background and context

Red Hat

Goal statement

▶ To provide a way for newer members of the PF community (designers, developers, and writers) to understand what components we offer through an easily scannable visual display.
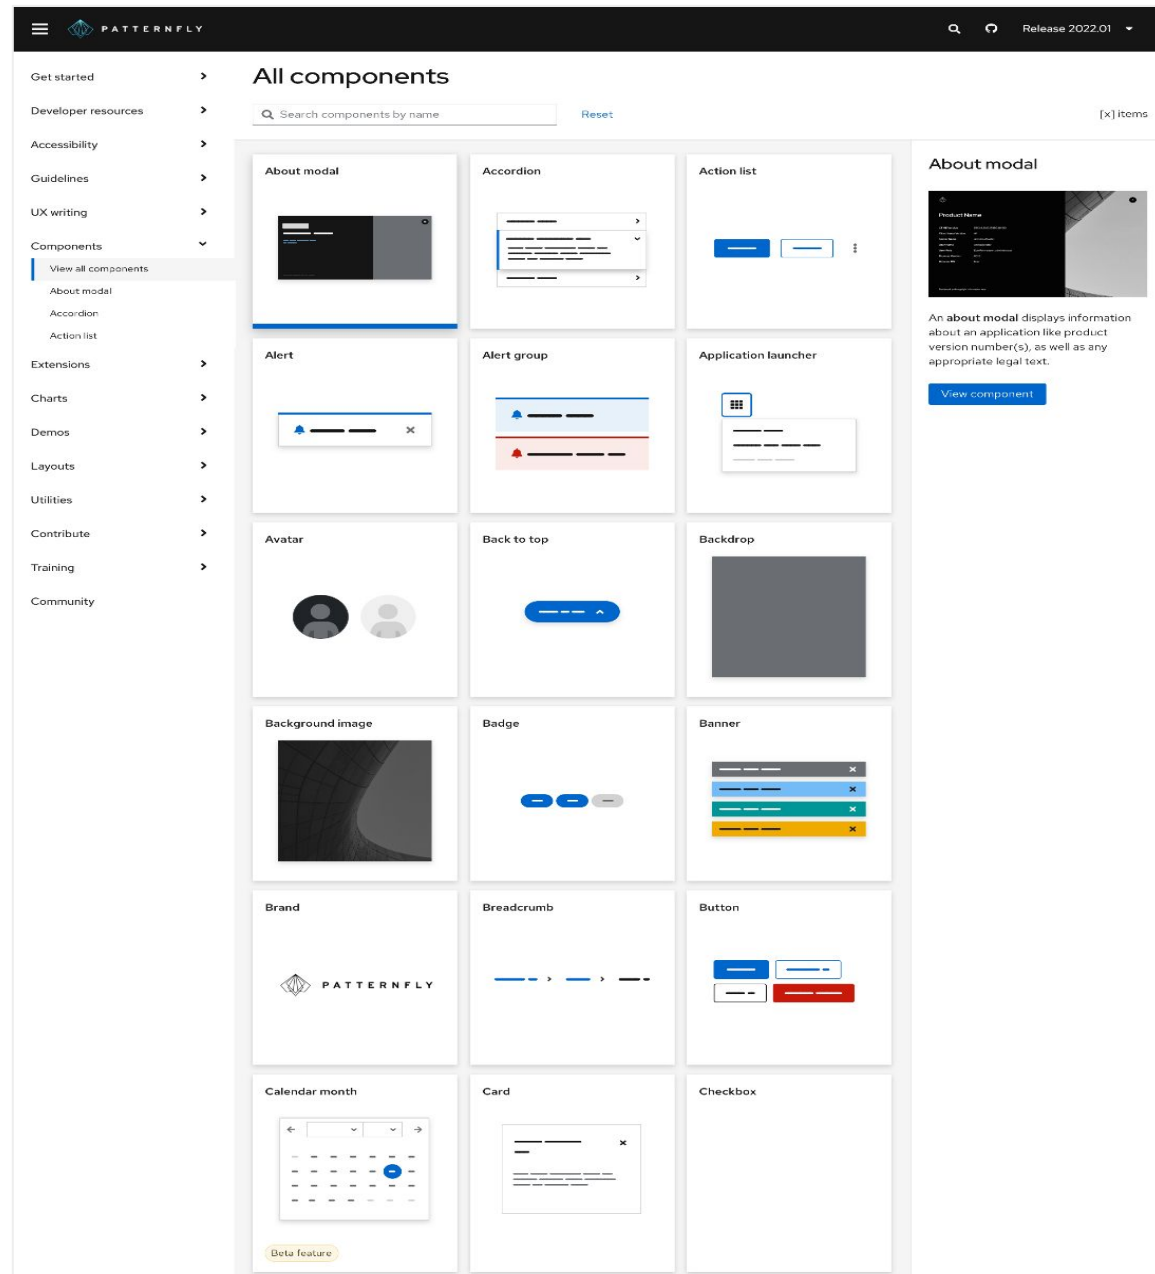

Red Hat

Why?

▶ We recognize that different design systems call components different names. For example, what we call a 'label' other systems might call a "lozenge"

▶ Increases efficiency for developers, designers, and writers to decide what component they would like to use.

Red Hat

Project timeline

Mary Shakshober started
developing the layout and
concept designs which went
through several feedback
cycles.

Angela, Shayna and I
completed illustrations and
received feedback from Mary,
Michael, and Matt
